

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The table is organized into three columns: "Variable", "Coefficient", and "Standard Error". The variables are categorized into "Demographics", "Economics", and "Social Factors". The coefficients represent the estimated effect of each variable on the number of children in the household, while the standard errors indicate the precision of these estimates.

Variable	Coefficient	Standard Error
Age of mother at birth	-0.05	0.01
Marital status (Married)	0.12	0.02
Income per capita	-0.08	0.03
Urban vs. Rural	0.03	0.01
Education level (High School)	-0.02	0.01
Religion (Catholic)	0.01	0.01
Health insurance (Medicaid)	0.04	0.02
Number of siblings	0.01	0.01
Parental employment (Full-time)	0.02	0.01
Parental education (Bachelor's)	-0.01	0.01
Parental income (High)	-0.03	0.02
Parental health (Good)	0.01	0.01
Parental social network (Large)	0.02	0.01
Parental mental health (Good)	0.01	0.01
Parental physical health (Good)	0.01	0.01
Parental cognitive health (Good)	0.01	0.01
Parental emotional health (Good)	0.01	0.01
Parental social support (High)	0.01	0.01
Parental mental health (Poor)	-0.01	0.01
Parental physical health (Poor)	-0.01	0.01
Parental cognitive health (Poor)	-0.01	0.01
Parental emotional health (Poor)	-0.01	0.01
Parental social support (Low)	-0.01	0.01
